

March 2008

It's BarNet's Birthday

Hurry.
Don't miss out
on this great
Birthday Offer

In March 2008, BarNet turns 8. It's not everyday you turn 8 and to celebrate we are very happy to announce a special free*, almost no strings attached** support offering to *all* Barristers and Clerks.

During the whole of March, you can call BarNet to book in for a FREE "PREVENTATIVE MAINTENANCE" SERVICE for your all of your chambers computers.

We will visit your Sydney CBD chambers, conduct a quick survey so that we can provide you with a service report and then undertake a series of maintenance and update tasks. While we are there, we can also look at any niggling computer problems you may have detected. We can also give you some training.

The work will include running appropriate system updates, disk defragmentation, performance tests, virus/spyware/malware scanning, and removal. We can also talk with you about your set up and requirements – including your back up systems and practices.

To take advantage of this 8th Birthday Offer, simply call the BarNet help desk on 02 8815 9090 or send us an email to info@barnet.com.au.

To ensure that the service visit is efficient and to make sure that we send the right support team member, we will ask you some questions about your set up prior to the visit.

This offer is open to *all* clerks, barristers, and support staff at the *NSW Bar*. You don't have to be a member of BarNet to take advantage of this offer.

* yes free, no charge for our work. We will charge for any parts you request us to obtain.

** well, only four. We will visit you in chambers during extended office hours (0830-1800). Visits will be booked on a first-come-first-served basis so call to reserve a booking at your preferred time and make sure you don't miss out. You must *make* the booking in the month of March 2008. Personal visits only to chambers located in the Sydney CBD. Remote visits to chambers located anywhere in Australia using our remote assistance systems which work with almost *any* network, including satellite and dial-up connections.
